

Creating a bash script to check if a directory is available or not

```
#!/bin/bash
```

```
clear
```

```
if [ -d /home/random/random2 ]
```

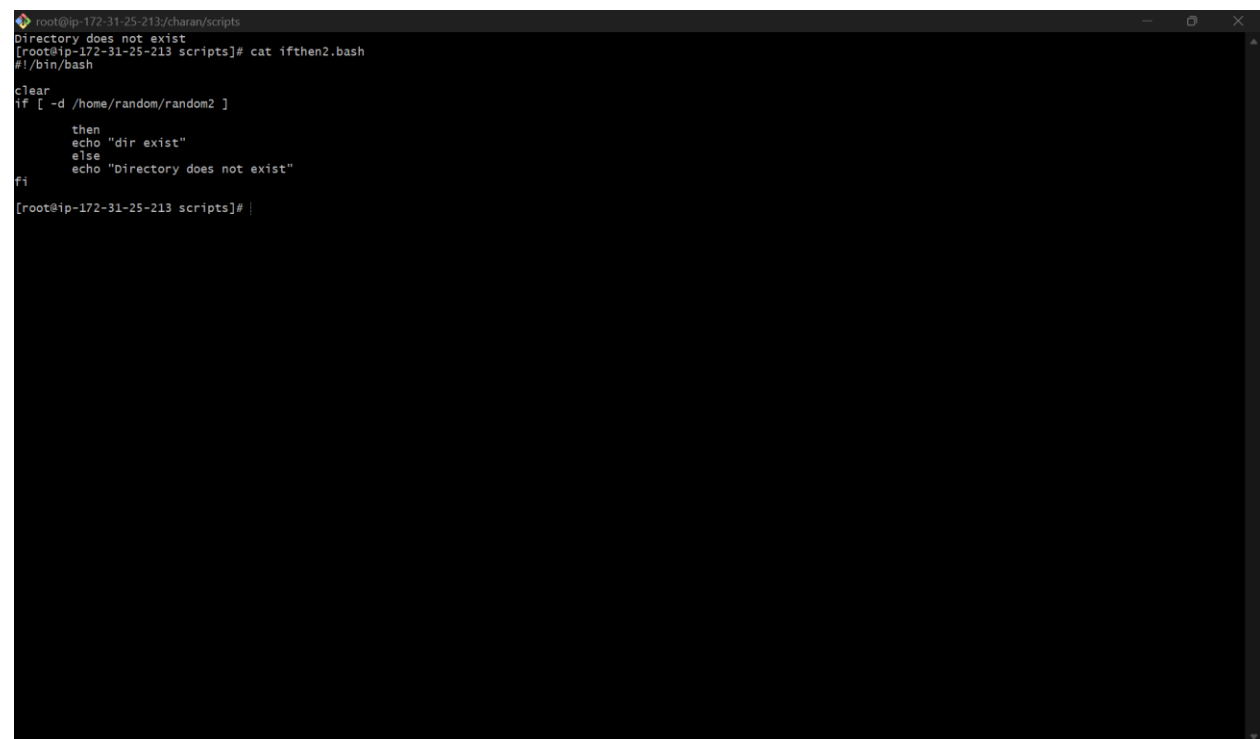

```
then
```

```
echo "dir exist"
```

```
else
```

```
echo "Directory does not exist"
```

```
fi
```

A terminal window with a dark background and light text. The window title is 'root@ip-172-31-25-213/charan/scripts'. The output shows 'Directory does not exist'. The user runs 'cat ifthen2.bash' to display the script content. The script includes a 'clear' command, an 'if' statement checking for the directory '/home/random/random2', and 'echo' commands for both 'then' and 'else' branches. The terminal ends with a prompt '[root@ip-172-31-25-213 scripts]# |' and a vertical scrollbar on the right side.

```
root@ip-172-31-25-213/charan/scripts
Directory does not exist
[root@ip-172-31-25-213 scripts]# cat ifthen2.bash
#!/bin/bash

clear
if [ -d /home/random/random2 ]
then
    echo "dir exist"
else
    echo "Directory does not exist"
fi
[root@ip-172-31-25-213 scripts]# |
```

Creating a bash script to create multiple files

```
#!/bin/bash
```

```
#creating multiple files
```

```
a=file.txt
```

```
b=file1.txt
```

```
c=file2.txt
```

```
echo
```

```
touch "$a" "$b" "$c"
```

```
